Night of the New Magicians

By Mary Pope Osborn

Published by Random House

Mary Pope Osborn writes another wonderful book that takes you to a carnival in Paris, France. Merlin sends Jack and Annie on a mission to find the four magicians in Paris. The first magician is Alexander Graham Bell, who could be heard for miles. His invention was the telephone that can call from a long distance.

The second magician was Thomas Edison, who made fire that glows but does not burn. His invention was the light bulb that glows but it does not burn anything around it.

Next, they had to look for the magician that fights people who can't be seen. The third magician was Mr. Pasteur. He discovered the cure for the disease rabies.

Only one more magician to find and time was running out! Jack and Annie had to find the magician that could mend iron. They traveled to the Eiffel Tower. The 1st magician was Mr. Eiffel. He built the Eiffel Tower from fiberglass that was a type of iron that could be mended.

These people were so smart that their inventions were like magic that changed the way people live.

Through her descriptive writing, Mary Pope Osborn takes her readers on a trip around Paris introducing her readers to interesting inventors.
